The European University for Geographical Identity
as a driver for Food systems Transition to sustainability

EU-GIFT is an alliance of seven European higher education institutions that will jointly design a strategy focused on excellence in teaching and research, especially in the fields of viticulture, quality-differentiated food and beverages, and sustainable agriculture.

EU-GIFT, the European alliance for geographical identity as a driver of the transition of food systems towards sustainability, brings together seven universities based on shared European values and principles:

- It aims to position itself as the leading European higher education institution dedicated to the development of sustainable and competitive systems based on geographical identity.
- Its objective is to integrate skills, research, and innovation needs that will successfully shape to quality-differentiated food production.
- The alliance's efforts will focus on innovating and creating sustainable value chains that not only benefit producers but also promote environmental conservation and social well-being.

Geographical Indications in the European Union

The countries that form the EU-GIFT Alliance account for 79% of the wines and 72% of the food products with geographical indication in the European Union.

Alliance data

	Associated entities	25
	Students	56.360
	Staff	5.837
	Faculties	63

Areas of interest

- Agricultural Engineering
- Business Administration
- Food Technology
- Food Quality and Safety
- Oenology, Viticulture and Horticulture
- Sustainable Food Chain
- Landscape Development and Nature Protection
